THE STUBENRAUCH PEACHES!

The Greatest Advance in the Peach Industry since the Origination of the Elberta!

This group of varieties are the result of the life-long work of Mr. J. W. Stubenrauch of Mexico, Texas, the originator of the well known Carman. A natural born scientist, he has cross pollinated, planted and cross pollinated again, always with the end in view that the results should finally bring forth varieties more hardy, more prolific, and of far better quality than any then in existence, and his efforts have not been in vain, as we can judge from the varieties which will soon be described.

One may presume that Texas would be too far south to test the hardiness of buds but in reality the Texas climate gives one of the most severe tests to the peach, both on account of freezes and from summer drought.

We have received by mail samples of all varieties described and must admit that they stood the journey remarkably well and have even remained in fine condition in our office for a week without refrigeration of any kind.

These are new to all sections except Texas but in comparison with the Elberta, in quality, productiveness and hardiness, they not only deserve a standing with that variety, lengthening the season by fully six weeks, but promise to revolutionize our present standard orchard varieties.

We have only a very few of the varieties described and when these are sold, can secure no more until another year.

While they last, we offer them at the following prices:

Sizes, $\frac{7}{16}$ to $\frac{9}{16}$ inches,	Each
3-6 ft.	\$.50
2-3 ft.	.40

Doz. \$5.00
4.00

Descriptions are principally as given by the originator. (All are yellow freestones.)

✓ EVA (Free)

Equal to Elberta in size, more round, nearly covered with red, similar quality. Fruit ripens several days in advance of Elberta and tree is a sure bearer.

✓ TENA (Free)

Ripens with Elberta, of same size, perhaps a little more color, and better quality. Very prolific bearer.

✓ TOUGHINA (Free)

Ripens a week after Elberta. Mr. Stubenrauch says of it, "In size, this peach is very large, some specimens weighing twelve ounces. The color is a bright yellow, nearly covered with beautiful red. This is practically a nectarine, has no fuzz at all, and skin as tough as a turnip, nearly covered with red, flesh quite juicy, and of the highest quality. Quality is far better than Elberta or even Hale, which I have growing close by. Owing to its blooming later, it escapes injury by cold when the Elbertas are killed. Speaking of the Hale, it is certainly ahead of Elberta and side by side, Toughina is yet decidedly ahead of Hale."

✓ ANITA (Free)

Ripens 10 days after Elberta. Seems to be a reproduction of same. Quality is very similar, but tree is even more prolific.

✓ LIZZIE (Free)

Ripens 2 weeks after Elberta. Is of a light lemon yellow with nice red, a fine shipper, good quality and size. With very little fuzz.

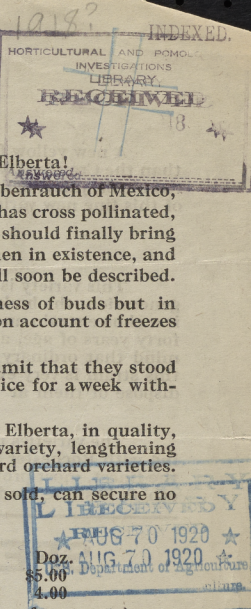

✓ J. H. HALE

This fine variety is already so well known as to hardly need description. Ripening a few days in advance of Elberta, it surpasses that variety in quality, size and color. A most valuable addition to the peach family.

5 cents each additional over catalog prices.

BARNES BROTHERS NURSERY COMPANY,

Yalesville, Conn.

ROCHESTER

A new yellow freestone, ripening about the middle of August, two weeks earlier and sweeter than the Crawford, yet more productive than Elberta. Fruit is large, yellow with a most attractive red blush, juicy, delicious, and fine keeper, even after handling and shipping. We have only a few of this fine new variety, being sold out of all except $\frac{3}{8}$ inch, which we will sell at 5 cents each additional over catalog prices.

BAIRD ELBERTA

This variety is a direct descendant from the original Elberta tree in Georgia. It is the third generation, the buds of each generation being taken directly from the original tree. We believe it is a choice strain and will uphold the reputation of its parent. The original tree lived to be nearly forty years of age, always producing very abundant crops of high quality fruit. When we bear in mind that ordinary varieties will not average over one-third of this age, the increased value of this strain is very evident. We have only a few of these to offer, and so long as they last, we will dispose of them at

2 cents each additional over other varieties.

The varieties mentioned in this circular are destined to revolutionize peach growing. Starting with Rochester and including the Stubenrauch varieties, we have a continuous succession of the finest, most prolific yellow varieties ever known. A word to the wise is sufficient. Plant while others hesitate, and you will reap while others sow.

SPECIAL

APPLE TREES, \$70.00 per 1,000

5% discount for cash with order and express allowed to your station on orders paid within 30 days of shipment.

READ WHY

We have just completed our count of nursery stock and find that we have on hand a limited number of trees of APPLE, PEAR and PLUM in most varieties listed in our catalog, which are not up to our regular two year grades in size. These trees are NOT diseased, misshapen, or damaged in any way; in fact they are as good as our larger grades except in size. They have a wonderfully well developed root system, which we have been able to dig without damage or mutilation.

THESE ARE JUST THE TREES FOR THE LARGE COMMERCIAL PLANTER, because they are most easily transplanted and will start into growth immediately without having to make new root systems.

WE ABSOLUTELY STAND BACK OF THEM, the same as our larger grades. Did you ever hear of such a bargain? They will not last long and to avoid disappointment, we advise that you send in your order today. Lest we cannot furnish some varieties you list, it might be well to make a second choice to avoid delay and assure yourself of a selection of these great bargain trees.

REMEMBER, these trees have been propagated from bearing orchards, noted for their prolificness; that we allow express charges on orders of \$10.00 or more paid within 30 days, and best of all, a 5% discount for cash with order.

3-4 ft. Apple Trees.
Note the fine Roots.

Apples, $\frac{3}{8}$ inch
Pears, $\frac{3}{8}$ inch
Plums, $\frac{3}{8}$ inch

3-4 ft.
